Subject: Dimock update

Maureen and Liz -

I wanted to let you know that EPA has shared with residents the 4th set of data which includes the 4th and 5th weeks of private well sampling in Dimock. This set of sampling did not show levels of contaminants that would give EPA reason to take further action. At one well, elevated methane was found - we informed the resident, PADEP, and county emergency responders.

I'll provide a link to the data when it's posted on the web, as I have previously.

If you have any questions or need further information, please let me know.

Have a good evening -

Jennie
